S&WE Products Manager Hanlon:

Greetings! I am deeply concerned about the implementation of the proposed Yucca Mt Nuclear Repository. The site has incredible flaw including the location over earthquake zones, groundwater contamination, and other issues. The last few weeks articulates the reality that no site can really be "safe". Transporting nuclear waste across this country will provide the biggest threat to national security that this country has ever witnessed. I live less than 6 miles from the Dairyland Nuclear Reactor located in Genoa, WI. Moving this waste will pose serious threats to the health and well being of our community.

In the late 80's Northern States Power shipped spent fuel from Monticello, MN through La Crosse, WI --where I live--on its way to Illinois. It was stopped in La Crosse because of a release of radiation. It was later moved after a sheet of plastic was attached to the leaking rail car. Is this the kind of protection we will get with Yucca Mt??? There have been no hearings, no public discussion of the transport of this material to Yucca Mt. This is seriously flawed and communities are not ready.

Please say no to Yucca Mountain!

Sincerely,

Guy Wolf
